

RSIC BlackBox™

Mileage, expense, time and location tracking for BlackBerry® smartphones

Introduction

RSIC BlackBox™ is a powerful solution for anyone who needs to keep track of their time, travel and expenses, suitable for both individual and organization wide usage. The application installs easily on all BlackBerry® smartphone models, with a learning curve that allows users to start using it right away. Employing a project based registration system, RSIC BlackBox makes it extremely easy to register time and travel information and link this information to a generic or specific project.

Users can choose between automatic registration or manual entry of information. When choosing the automatic registration method, the application registers time using the built-in clock of the BlackBerry smartphone. For automatic distance tracking, either the internal GPS antenna of the BlackBerry smartphone or an external Bluetooth GPS can be used. All the end-user has to do is press the start and stop buttons and all information is stored on the BlackBerry smartphone. Afterwards, information can be reviewed, edited, deleted or reported.

Reporting and data processing

Every version of RSIC BlackBox supports E-mail based reporting, which enables users to send their registered data to one or more E-mail boxes. This can be the user's own E-mail box or one belonging to an administrative department, a secretary or an automated processing system. The registered data is attached to the E-mail in MS Excel, .CSV (semicolon separated) or PDF format and can be printed, analyzed, edited and processed by the recipient right away.

Reports in other formats, like XML, HTML, Word or proprietary formats, can be made available and can be requested by contacting the RSIC sales team at sales@rsic.mobi. BlackBox can be linked to any back-end database system for data storage and processing purposes, using proprietary and secure low-cost server software, allowing for integration with Accounting, ERP, ECM or other systems.

Tracking & Tracing and Panic function

RSIC BlackBox includes powerful tracking and tracing functionality that allows organizations to keep track of the location of individual workers. When this function is enabled, the application sends out the current location of the end-user (provided the availability of GPS coordinates), whenever a configured time interval has elapsed. The application also offers an easy to use panic button function, allowing end users to signal others for assistance, whenever required.

Advantages

- ⇒ Make efficient use of your BlackBerry infrastructure
- ⇒ Save time on keeping track of time, expenses and mileage
- ⇒ Save costs on paper forms and expensive custom software
- ⇒ Enter information once and re-use it infinitely

Free trial

RSIC BlackBox is sold on a try-before-you-buy basis and includes a free 15-day trial period. Freely use this time to test the application and see if it fits your or your organizations needs!

Customization for large organizations

If you have a large organization and need RSIC BlackBox for your organization members or you need a large number of licenses for any other reason, it is possible to adapt RSIC BlackBox's functionality and even brand the software for your internal use. Please contact RSIC if you wish to discuss these possibilities.

Features

- ⇒ Support for all BlackBerry smartphone models, both BES and BIS.
- ⇒ Easy to use and effective panic button function.
- ⇒ Project based working, allowing for easy management of records for multiple projects and easy creation, editing or deletion of projects.
- ⇒ Manual or automatic registration of time, with easy entering of comments and descriptions.
- ⇒ Manual or automatic registration of traveled distances (mileage tracking), using the device's built-in GPS or an external GPS antenna.
- ⇒ Low cost tracking and tracing solution with the Location Tracking function, optionally in conjunction with RSIC's Track & Trace service.
- ⇒ Support for standard descriptions, to allow more efficient data entry.
- ⇒ Support for multiple currencies.
- ⇒ Support for imperial and metric systems.
- ⇒ Easy exporting of data in Excel, CSV and PDF formats. Other export formats can be requested.
- ⇒ Easy customization by RSIC to fit your specific organizational needs and integrate the software with any back-end system.

System requirements

- ◆ *BlackBerry smartphone (BIS and BES)*
- ◆ *BlackBerry OS 5.0 or higher*
- ◆ *BlackBerry smartphone with internal GPS or an external NMEA compatible Bluetooth GPS antenna required for automated mileage tracking and location tracking*
